

# Features

# Regulated Converters

- 4:1 Wide Input Range
- 3kVAC Reinforced Insulation for 110Vin  
2.25kVDC Basic Insulation for 24Vin & 48Vin
- Efficiency up to 93%
- No Minimum Load Required
- EN50155, IEC/EN60950-1 & UL60950-1 Certified

## Description

The half-brick RP100H series DC/DC converters are designed for railway rolling stock and high voltage battery applications. Each series has three 4:1 input voltage range options to cover all input voltages from 9VDC up to 160VDC with isolated and regulated 5V to 48VDC outputs. The converters have high efficiencies and metal base-plates to permit a wide operating temperature range from -40°C to +85°C (when mounted on a suitable heatsink). The case is fitted with threaded inserts to allow secure mounting to the PCB or bulkhead for use in high shock and vibration environments. The converters are EN50155, UL60950 and IEC/EN60950 certified. The RP100H-RW series have a three year warranty.

## Selection Guide

| Part Number     | Input Voltage Range [VDC] | Output Voltage [VDC] | Output Current [mA] | Input <sup>(1)</sup> Current [mA] | Output Power [W] | Efficiency <sup>(1)</sup> typ. [%] | Max. Capacitive Load [µF] |
|-----------------|---------------------------|----------------------|---------------------|-----------------------------------|------------------|------------------------------------|---------------------------|
| RP100H-2405SRW  | 9-36                      | 5                    | 20000               | 4480                              | 100              | 93                                 | 40000                     |
| RP100H-2412SRW  | 9-36                      | 12                   | 8400                | 4666                              | 101              | 90                                 | 7000                      |
| RP100H-2415SRW  | 9-36                      | 15                   | 6700                | 4601                              | 100              | 91                                 | 4460                      |
| RP100H-2424SRW  | 9-36                      | 24                   | 4200                | 4666                              | 101              | 90                                 | 1750                      |
| RP100H-2448SRW  | 9-36                      | 48                   | 2100                | 4666                              | 101              | 90                                 | 430                       |

| RP100H-11048SRW | 43-160                    | 48                   | 2100                | 1007                              | 101              | 90                                 | 430                       |

### Notes:

Note1: Efficiency is tested by nominal Vin, full load and at 25°C.

## Model Numbering

### Ordering Examples

- RP100H-2405SRW/N = 24V Input, 5V Output, Single, Neg. CTRL function
- RP100H-11012SRW/P = 110V Input, 12V Output, Single, Pos. CTRL function
- RP100H-2405SRW/N-HC = 24V Input, 5V Output, Single, Neg. CTRL function, premounted Heat-sink

### Notes:

- Note2: standard part is with suffix "P" for positive logic (1=ON, 0=OFF) or add suffix "N" instead for negative logic (0=ON, 1=OFF)
- Note3: add suffix "-HC" for premounted Heat-sink (compatible with all other suffixes)

## OUTPUT TRIM

### Output Voltage Trimming

RP100H-RW converters offer the feature of trimming the output voltage over a certain range around the nominal value by using external trim resistors. The values for trim resistors shown in trim tables below are according to standard E96 values; therefore, the specified voltage may slightly vary; they also can be calculated with below shown equation.

Specifications (measured @  $t_a = 25^\circ\text{C}$ , nominal input voltage, full load and after warm-up)

## OUTPUT TRIM

### Trim Calculation

$$R_1 = \left[ \frac{100 \cdot V_{out} + \Delta V_{out} \cdot V_{out}}{1.225 \cdot \Delta V_{out}} - \frac{(100 + 2 \Delta V_{out})}{\Delta V_{out}} \right] \text{k}\Omega$$

$$R_2 = \left[ \frac{100}{\Delta V_{out}} - 2 \right] \text{k}\Omega$$

$V_{out}$  = Output Voltage  
 $\Delta V_{out}$  = Output Voltage Trim in %  
 $R_1$  = trim up resistor  
 $R_2$  = trim down resistor

### Practical Example:

#### Trim Up:

$V_{out} = 5\text{V}$ ,  $\Delta V_{out} = 10\%$  (5.5V)

$$R_1 = \left[ \frac{100 \cdot V_{out} + \Delta V_{out} \cdot V_{out}}{1.225 \cdot \Delta V_{out}} - \frac{(100 + 2 \Delta V_{out})}{\Delta V_{out}} \right] \text{k}\Omega = \frac{100 \cdot 5 + 10 \cdot 5}{1.225 \cdot 10} - \frac{100 + 2 \cdot 10}{10} = 44.89 - 12 = 33.2 \text{k}\Omega$$

#### Trim down:

$V_{out} = 5\text{V}$ ,  $\Delta V_{out} = -10\%$  (4.5V)

$$R_2 = \left[ \frac{100}{\Delta V_{out}} - 2 \right] \text{k}\Omega = \frac{100}{10} - 2 = 8.06 \text{k}\Omega$$

Specifications (measured @  $t_a = 25^\circ\text{C}$ , nominal input voltage, full load and after warm-up)

## Remote Sense

The output voltage can be adjusted by both trim and remote sense. The maximum combined adjustment range  $\pm 10\%$ . Derate the maximum output power if using the trim or sense function.

$R_{W1}$  ... wire losses +  
 $R_{W2}$  ... wire losses -  
 $R_1$  ... trim up resistor  
 $R_2$  ... trim down resistor

## REGULATIONS

| Parameter          | Condition                          | Value  |
|--------------------|------------------------------------|--|
| Output Accuracy    |                                    | $\pm 1.0\%$                                    |
| Line Regulation    | low line to high line at full load | $\pm 0.1\%$                                    |
| Load Regulation    | 0% to 100% load                    | $\pm 0.1\%$                                    |
| Transient Response | 25% load step change               | 200 $\mu\text{s}$ typ.; 250 $\mu\text{s}$ max. |

### Transient Response to Dynamic Load Change from 100% to 75% to 100% of Full Load at nom.Vin

**Specifications** (measured @ ta= 25°C, nominal input voltage, full load and after warm-up)

| Fire protection on railway vehicles |   | according to EN45545-2, 2013 standard |
| MTBF                                | according to MIL-HDBK-217F standard, 25°C                           | 408.7 x 10 <sup>3</sup> hours         |

**Thermal Calculation**

$$R_{th\text{case-ambient}} = 6.7^\circ\text{C/W (vertical)}$$

$$R_{th\text{case-ambientHC}} = 4.7^\circ\text{C/W (vertical)}$$

$$R_{th\text{case-ambient}} = \frac{T_{\text{case}} - T_{\text{ambient}}}{P_{\text{dissipation}}}$$

$$P_{\text{dissipation}} = P_{\text{IN}} - P_{\text{OUT}} = \frac{P_{\text{OUTapp}}}{\eta} - P_{\text{OUTapp}}$$

- T<sub>case</sub> = Case Temperature
- T<sub>ambient</sub> = Environment Temperature
- P<sub>dissipation</sub> = Internal losses
- P<sub>IN</sub> = Input Power
- P<sub>OUT</sub> = Output Power
- η = Efficiency under given Operating Conditions
- R<sub>thcase-ambient</sub> = Thermal Impedance

**Practical Example:**

Take the RP100H-2405SRW with 9V input Voltage and 50% load. What is the maximum ambient operating temperature? Use converter vertical in application without airflow.

$$Eff_{\text{min}} = 91\% @ V_{\text{nom}}$$

$$P_{\text{OUT}} = 100\text{W}$$

$$P_{\text{OUTapp}} = 100 \times 0.5 = 50\text{W}$$

$$\eta = 91\% \text{ (Efficiency vs. Load Graph)}$$

$$P_{\text{dissipation}} = \frac{50}{0.91} - 50 = 4.95\text{W}$$

**without Heat-sink**

$$R_{th} = \frac{T_{\text{casemax}} - T_{\text{amb}}}{P_{\text{dissipation}}} \rightarrow 6.7^\circ\text{C/W} = \frac{105 - T_{\text{amb}}}{4.95\text{W}}$$

$$T_{\text{amb}} = 72^\circ\text{C}$$

**with Heat-sink**

$$R_{thHC} = \frac{T_{\text{casemax}} - T_{\text{amb}}}{P_{\text{dissipation}}} \rightarrow 4.7^\circ\text{C/W} = \frac{105 - T_{\text{amb}}}{4.95\text{W}}$$

$$T_{\text{ambHC}} = 82^\circ\text{C}$$

| Immunity to conducted disturbances, induced by radio-frequency fields  | 10 Vr.m.s   | EN61000-4-6, Criteria A      |
| Power Magnetic Field Immunity  | 100A/m continuous; 1000A/m 1s                     | EN61000-4-8, Criteria A      |

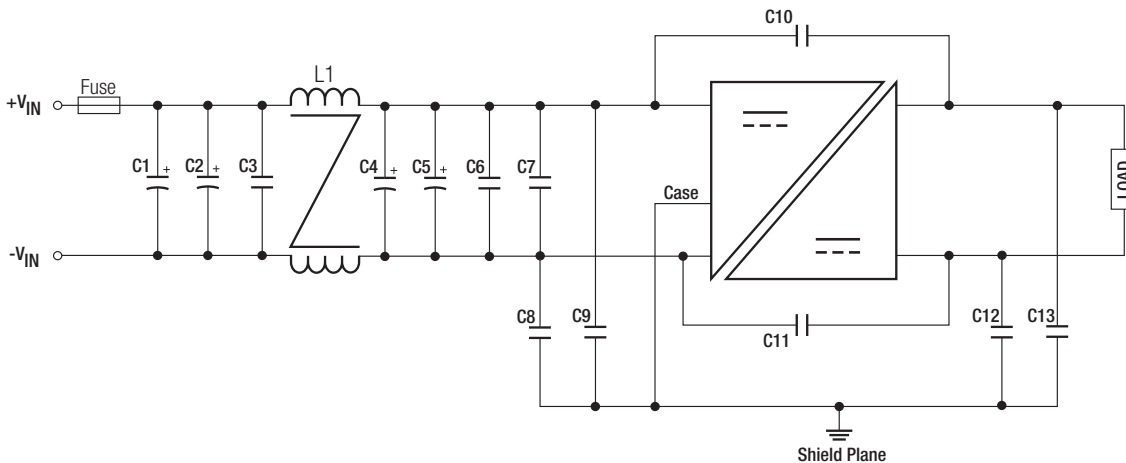

#### Notes:

Note6: An external input filter capacitor is required if the module has to meet EN61000-4-4 and EN61000-4-5.

The **24Vin** and **48Vin** version recommend 2pcs of aluminium electrolytic capacitor to connect in parallel.  
Recom suggest: Nippon Chemi-con KY series, 220 $\mu\text{F}$ /100V.

The **110Vin** version recommend 2pcs of aluminium electrolytic capacitor to connect in parallel.  
Recom suggest: Nippon Chemi-con KXJ series, 150 $\mu\text{F}$ /200V
